

Installation

Before application:

- Make sure the surface is free of dust or any other debris.
- Cover any plants or other objects to protect them from possible contamination.
- Wear gloves and protective glasses.
- You can use a sprinkler for your application.

For difficult stains (concentrate):

- Apply concentrated D-Grix to dry surfaces.
- Scrub the stained area with a firm bristle brush.
- Wait 10 to 15 minutes for the product to act.
- Rinse thoroughly with a hose using the highest pressure possible. Excess product residue may interfere with the penetration of other protective products.
- If necessary repeat the process. In most cases one application will be sufficient.
- Be sure to water surrounding plants and grass before and after application.

For general cleaning (diluted):

- Dilute D-Grix with water in equal amounts (50/50) in a spray bottle. Apply to clean, dry surface by spraying a coat of the product.
- Wait 5 to 15 minutes.
- Scrub lightly with a broom.
- Rinse thoroughly with a hose using the highest pressure possible. Excess product residue may interfere with the penetration of other protective products.
- Be sure to water surrounding plants and grass before and after application.

Storage:

Keep the product in its original container tightly closed in cool, dry places.

Presentation and performance:

D-Grix is presented in a 4 liter container with an approximate yield of 80 m² to 100 m² if concentrated and 160 to 200 m² if used diluted.

Performance may vary depending on the application method and the porosity, surface texture and intensity of the residue to be removed.
